STATINTL

Dear [Redacted],

STATINTL

The enclosed letter to [Redacted] speaks for itself as to his qualities as a representative of NPIC-CIA. You are fortunate to have such a dynamic person on your staff and we are fortunate that he was able to visit us at Norwich. The Agency always needs topflight personnel and, with the image portrayed by Mr. [Redacted] should be able to attract such.

STATINTL

Sincerely,

*[Handwritten signature]*

(Miss) Noel Ring  
Instructor of Geography  
Earth Science Department

STATINTL

Dear [REDACTED]

Please excuse what must seem a terribly belated thanks for your kindness in presenting such an interesting glimpse of NPIC activities to my students in geography on September 23. And you did a magnificent job of fielding some really "hot" questions about the CIA. Am thinking our Diplomatic Corps could use your talents as well.

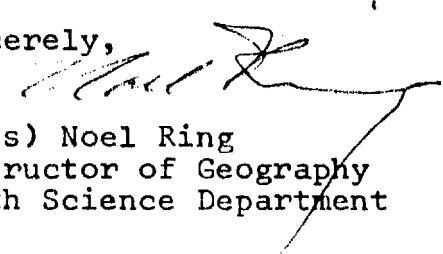

In any case, I cannot put my assessment of your visit in better terms than a senior cadet did during the following week; "Thanks Miss Ring. That was the most exciting class I've had during all my time at Norwich!" Well, I'd say the CIA's image in this "neck-of-the-woods" is very good. Surely, you are a credit to all the institutions with which you've been associated, and I am so delighted that being a Norwich alumnus brought you here to give our students such an enlightening and candid view of NPIC-CIA activities.

Obviously, our mutual interest in aerial archeology should provoke a continuing dialogue. I plan to publish a preliminary report soon on the relict traces of ancient European landscapes found here. In a letter to the Portuguese Ambassador, I've suggested that their talented young specialist, João Calvão, who trained with Roger Agache, might usefully attend the "Ancient Vermont" conference next week. At present, we're enlarging the Skylab imagery of Vermont to test our "API". Archeology by satellite - an exciting probability!

Again, my deep appreciation for your instructional and diplomatic skills. Incidentally, the current issue of RSEMS, "Remote Sensing of the Electro Magnetic Spectrum", Vol. 4, No. 3, July 1977, has a long article on an archeological study done in the Southeast. This is the AAG's remote sensing journal, \$3.00 a year bargain, in case you're not a subscriber. No doubt that the high altitude, high resolution photography is useful, though the study mentioned was CIR at 1:6000 and 1:12000 - like shooting fish in a barrel!

All best wishes in your continuing endeavors to attract talented personnel to NPIC and the Agency. I suspect more than one potential candidate here now favorably inclined. Shall send you any useful data per mutual research on ancient landscapes. And, do visit us again!

Sincerely,

  
(Miss) Noel Ring  
Instructor of Geography  
Earth Science Department
